Brooks® Models SLA5850, SLA5851, SLA5853 Mass Flow Controllers and Models SLA5860, SLA5861, SLA5863 Mass Flow Meters

GENERAL FEATURES

- Wide FS flow range for measurement and control of gases from <3 ccm to 2500 lpm (N₂ equivalent)
- Accuracy up to 1200 lpm: ±1.0% of rate (20%-100% FS) ±0.2% FS (below 20% FS)
1200-2500 lpm: ±1% FS including linearity.
(at calibration conditions).
- Industry leading sensor stability. Long term drift performance of < 0.2% per year. Increased system throughput by reducing maintenance and eliminating periodic recipe adjustment.
- Storage of up to 10 selectable calibration curves. Spares inventories are reduced by limiting the number of individual MFC/M's required, lowering inventory holding costs.
- Elastomer downport process connection option conforms to ANSI/ISA SP-76 standard to offer simplified installation and maintenance in an efficient footprint.

Control Response:

- Settling Time of less than 1 second.
(better on request).
- Soft start can be used to tailor MFC performance to process requirements.
- Proprietary Adaptive Valve Control algorithm is available which assures that unexpected variations in process pressure do not cause flow to deviate from setpoint.

Analog I/O Option:

- 15-pin D-Connector
- 0(1)-5 Volt or 0(4)-20 mA setpoint and flow signals
- Single sided 24 Volt DC power supply
(13.5-27 volts DC range).
- Separate Valve-Override signal
- Precision 5 Volt Reference Output signal
- Compatible with Brooks' Model 0150 series secondary electronics
- TTL (open collector) Alarm Output signal

Digital Communication Options:

- DeviceNet™, ODVA™ certified
- FOUNDATION™ Fieldbus, H1 Certified
- HART® based RS-485 multidrop

DESCRIPTION

Brooks Instrument's SLA5800 Series is an elastomer sealed digital thermal mass flow measurement and control instrument, which offers unparalleled flexibility and performance. The SLA5800 Series MFC is designed for use in advanced gas handling systems. The result is the most accurate, repeatable, and responsive MFC on the market today!

Wide Flow Range

The SLA5800 Series covers an extremely broad range of flowrates. Model SLA5850 can have a full scale flow as low as 3 ccm. With a high turndown ratio of 50:1, accurate gas flow can be measured or controlled down to 0.06 ccm! Model SLA5853 can meter or control gas flow up to 2500 lpm.

Fast Response Performance

The all-digital electronics and superior mechanical configuration in the SLA5800 series provide for ultra fast response characteristics. Settling times are specified as less than one second, but Brooks' Adaptive Valve Control can achieve response times of 0.2 sec.

Broad Array of Communication Options

Brooks® offers traditional 0-5 volt and 4-20mA analog options as well as RS-485 digital communications ("S-protocol", based on HART). Brooks also offers control interface via digital network protocols like DeviceNet, a high-speed (up to 500k baud) digital communication network, or FOUNDATION® Fieldbus. Brooks' communication capabilities and device-profiles have been certified by the ODVA (Open DeviceNet Vendor's Association) and the ITK Interoperability Test Kit. Other network protocols are in development. Talk to your Brooks representative about your specific needs.

Reduced Cost of Ownership

The SLA5800 Series allows multi-gas and multi-range capabilities to reduce customer inventory. Storage and pre-programming of up to 10 gas calibrations easily permits users to switch between different gases and ranges on a single device.

Coplanar Valve Option

The coplanar valve option offers unmatched performance. Due to its simplified construction, the valve exhibits superior turndown, repeatability, stability and response time.
